Carbon and Its Compounds

ONE MARK QUESTIONS

Write the molecular formula of first two members of homologous series having functional group —Cl.

Ans:

[CBSE 2017]

- (1) CH₂Cl Chloromethane
- (2) CH₂CH₂Cl Chloroethane
- Write the molecular formula of first two members of homologous series having functional group —Br.

[CBSE 2017]

- (1) CH₂Br Bromomethane
- (2) C₂H₅Br Bromoethane
- Write the molecular formula of first two members of homologous series having functional group —OH.

Ans:

[CBSE 2017]

- (1) CH₃OH Methanol
- (2) C₂H₅OH Ethanol
- Write the molecular formula of 2nd and the 3rd member of homologous series whose first member is methane.

Ans:

[CBSE 2017]

- (1) CH₃—CH₃ Ethane
- (2) CH₂—CH₂—CH₃ Propane
- Write the formula of first two members of homologous series whose functional group is —CHO.

Ans:

[CBSE 2017]

$$\begin{array}{cc} & & O \\ \parallel & \\ 1. & H-C-H \text{ Methanal} \end{array}$$

O
$$\parallel$$
2. CH_3-C-H Ethanal

Write the formula of first two members of homologous series whose functional group is

[CBSE 2017]

1.
$$CH_3 - C - CH_3$$
 2-Propanone

1.
$$CH_3 - C - CH_3$$
 2-Propanone
$$CH_3 - C - CH_2 - CH_3$$
 2-Butanone

Write the molecular formula of the first two members of the homologous series having functional group -COOH.

Ans:

[CBSE 2017]

- (1) HCOOH Methanoic acid
- (2) CH₃COOH Ethanoic acid
- Write the molecular formula of 2nd and 3rd member of the homologous series whose first member is ethyne.

[CBSE 2017]

- (1) $HC \equiv C-CH_3$ Propyne
- (2) $HC \equiv C CH_2 CH_3$ 1-Butyne
- Write the molecular formula of 2nd and 3rd member of the homologous series whose first member is ethene.

Ans:

[CBSE 2017]

- (1) $CH_2 = CH CH_3$ Propene
- (2) CH₂=CH—CH₂—CH₃ 1-Butene

10. Write the next homologue of each of the following:

a. C₂H₄

b. $C_4^2 H_6^4$

[CBSE 2016]

- Ans: (1) C_3H_6 , $CH_9=CH-CH_3$
- (2) C_5H_8 , $HC=C-CH_9-CH_9-CH_9$
- Name the following compounds:

a. CH₂CH₂OH

Ans:

[CBSE 2016]

- Ethanol
- b. Ethanal
- 12. Select the saturated hydrocarbons from the following: $C_{3}H_{6}, C_{5}H_{10}, C_{4}H_{10}, C_{6}H_{14}, C_{2}H_{4}$

[CBSE 2016]

C₄H₁₀, C₆H₁₄ are saturated hydrocarbons

Write the name and structure of an alcohol with three

1					1 1	
carbon	atoms	1n	11.5	mo	lec11	PS

Ans: [CBSE 2016]

CH₂CH₂CH₂OH, 1-Propanol

14. Write the name and structure of an alcohol with four carbon atoms in its molecule.

Ans: [CBSE 2016]

CH₂CH₂CH₂CH₂OH, 1-Butanol

15. Write the name and structure of an aldehyde with four carbon atoms in its molecule.

Ans: [CBSE 2016]

$$\begin{matrix} & & & \\ & & \\ \mathrm{CH_3-CH_2-CH_2-C-H~Butanal} \end{matrix}$$

16. Which element exhibits the property of catenation to maximum extent and why?

Ans: [CBSE 2016]

Carbon because it can form strong covalent bond with other carbon atoms due to smaller size.

17. Write the name and formula of fourth member of alkane series.

Ans: [CBSE 2016]

 CH_3 — CH_2 — CH_2 — CH_3 , Butane

18. What is a homologous series of carbon compounds?Ans: [CBSE 2016]

Homologous series is series of organic compounds which have same functional group and similar chemical properties and each successive member has more — ${\rm CH_2}$ unit than the previous one.

19. A colourless gas X has a formula C_3H_6 . It decolourises bromine water. Write the chemical formula of 'X'.

Ans: [CBSE 2016]

CH₂=CH—CH₂, Propene

20. Draw the structural formula of methanoic acid.

Ans: [CBSE 2016]
O

H—C—OH Methanoic acid

21. A molecule of ammonia has the formula $\mathrm{NH_3}$. Predict the total number of bonds present around nitrogen atom.

Ans: [CBSE 2016] $H-\overset{\cdots}{N}-H$, it has three covalent bonds

Write the number of covalent bonds in the molecule of ethane.

Ans: [CBSE 2016,2015,2011]

$$\begin{array}{cccc} H & H \\ & \mid & \mid \\ H-C-C-H & \text{has 7 covalent bonds} \\ & \mid & \mid \\ H & H \end{array}$$

23. Write the next homologue of propanol $CH_3CH_2CH_2OH$ and but anal $CH_3CH_2CH_2CHO$.

Ans: [CBSE 2016,2011]

a. $CH_3CH_2CH_2CH_2OH$, Butanol

b. CH₃CH₂CH₂CH₂CHO, Pentanal

24. Unsaturated hydrocarbon gives a yellow flame with lot of black smoke when burnt in oxygen. Give reason.

Ans: [CBSE 2015]

Unsaturated hydrocarbons have more amount of carbon, therefore burns with smoky flame due to incomplete combustion.

25. Write molecular formula of alcohol which can be derived from butane.

Ans: .[CBSE 2015]

CH₃CH₂CH₂CH₂OH, 1-Butanol

26. Carbon has four electrons in its valence shell. How does carbon attain stable electronic configuration?

Ans: [CBSE 2015]

Carbon can share four electrons to acquire stable electronic configuration.

27. Write the name and formula of 2nd member of homologous series having general formula C_nH_{2n} .

Ans: [CBSE 2015]

CH₂=CH—CH₃ is second member of alkene.

28. Write the name and formula of 2^{nd} member of homologous series having general formula C_nH_{2n+2} .

Ans: [CBSE 2015]

CH₂—CH₂, Ethane

29. Write the name and formula of 2^{nd} member of homologous series having general formula C_nH_{2n-2} .

Ans: [CBSE 2015]

 $HC \equiv C-CH_3$, Propyne

30. Write the number of covalent bonds in the molecule of propane, C₃H₆.

or propane, $C_3 \mathbf{n}_6$.

Ans: [CBSE 2015]

31. Write the number of covalent bonds in the molecular formula of butane, C₄H₁₀.

Ans: [CBSE 2015]

32. Name the process by which unsaturated fats are changed into saturated fats.

Ans: [CBSE 2015]

Hydrogenation

33. Write the name of each of the following functional

-OH Ans:

[CBSE2015]

- Alcohol
- Ketone
- 34. Write the name and molecular formula of the first member of homologous series of alkynes.

Ans:

[CBSE2015]

HC=CH, Ethyne

35. Mention the functional group which always occurs at the terminal position of a carbon chain of an organic compound.

Ans:

[CBSE 2015]

- Aldehyde
- Carboxylic acid
- **36.** The formula of citric acid is shown below:

$$\begin{array}{c} \operatorname{COOH} \\ \operatorname{CH}_2 \\ \operatorname{HO-C-COOH} \\ - \\ \operatorname{CH}_2 \\ \operatorname{COOH} \end{array}$$

State the name of —COOH functional group in citric acid.

Ans:

[CBSE 2014]

Carboxylic acid

- 37. Name the functional group in the following compounds:
 - $\mathrm{a.}\quad \mathrm{CH_3}\mathrm{--CH_2}\mathrm{--CH_2}\mathrm{--COOH}$
 - b. CH_3 —CO— CH_2 — CH_3

Ans:

[CBSE 2014]

- Carboxylic acid а.
- Ketone b.
- 38. State the valency of each carbon atom in (i) an alkane and (ii) an alkyne.

Ans:

[CBSE 2014]

- The valency of 'C' in alkane is 4.
- The valency of 'C' in alkyne is also 4.
- 39. Write the molecular formula of benzene and state the number of double bonds in its structure.

Ans:

[CBSE 2014]

These are 3 double bonds

40. List two characteristic features of carbon which when put together given rise to a number of carbon compounds.

Ans:

[CBSE 2014,2010]

- (a) Tetravalency (b) Catenation
- 41. The molecular formula of A is $C_{10}H_{18}$ and B is $C_{18}H_{36}$. Name the homologous series to which they belong.

Ans:

[CBSE 2014]

 $C_{10}H_{18}$ belongs to alkyne, $C_{18}H_{36}$ belongs to alkene.

42. Write the names of next homologue of CH₃CH₂OH and HCOOH.

Ans:

[CBSE 2014]

- (i) CH₂CH₂CH₂OH, Propanol
- (ii) CH, COOH, Ethanoic acid
- 43. Will micelle formation take place when soap is dissolved in organic solvent?

Ans:

[CBSE 2014]

No, micelles will not be formed in organic solvent.

44. Explain why washing clothes with hard water is not effective.

Ans:

[CBSE 2014]

Soap reacts with Ca²⁺ and Mg²⁺ ions present in hard water to form scum.

45. Draw the structure of simplest ketone.

Ans:

[CBSE 2014,2011]

$$\begin{array}{cccc} H & O & H \\ H - C - C - C - H \\ H & H \end{array}$$

46. Why do alkanes burn with blue flame?

[CBSE 2013]

It is because they have less carbon and more hydrogen, therefore, undergo complete combustion and produce blue flame.

47. What happens when a small piece of sodium is dropped into ethanol?

Ans:

[CBSE 2013,2011]

Sodium ethoxide and H₂ gas is formed $2C_{2}H_{5}OH + 2Na$ \longrightarrow 2C₂H₅ONa + H₂

48. What will you observe on adding a 5% alkaline KMnO₄ solution drop by drop to some warm ethanol taken in a test tube? Write the name of the compound formed during the above chemical reaction.

[CBSE 2013,2011]

The purple colour of $\mathrm{KMnO_4}$ decolourises and ethanoic acid will be formed

 $\xrightarrow{\text{Alk. KMNO}_4} \text{CH}_2\text{OOH}$ C₂H₅OH -

49. How is scum formed?

Ans:

[CBSE 2012]

Ca²⁺ and Mg²⁺ ions react with soap (sodium stearate)

to form calcium and magnesium stearate which is insoluble in water and called scum.

50. Name the functional group present in each of the following organic compounds:

a. C_aH_e—Cl

b. C₂H₅OH

Ans:

[CBSE 2012]

a. Halogen

b. Alcohol

51. Name the functional group present in each of the following compounds:

a. HCOOH

b. C₂H₅CHO

Ans:

 $[CBSE\ 2012]$

a. Carboxylic acid

b. Aldehyde

52. Name the functional group present in each of the following compounds:

a. CH₂COCH₂

b. C₂H₅COOH

Ans:

[CBSE 2012]

a. Ketone

b. Carboxylic acid

53. Write the name and formula of the second member of carbon compounds having functional group —OH.

Ans: [CBSE 2012]

CH₂CH₂OH, Ethanol

54. Write the name and formula of the first member of series of carbon compound having functional group—CHO.

Ans:
O
||
H=C=H Mathana

[CBSE 2012]

[CBSE 2012]

55. Write the name and formula of the first member of carbon compounds having functional group —COOH.

Ans:
O
||
H-C-OH Methanoic acid

56. Write the name and formula of the 2nd member of the series of carbon compounds whose general formula is C_nH_{2n+1} —OH.

Ans:

[CBSE 2012]

C₂H₅OH, Ethanol

57. Write the name and formula of 2nd member of the series of carbon compounds whose general formula is ${\rm CnH_2n.}$

Ans:

[CBSE 2012]

CH₂=CH—CH₂, Propene

58. State the difference between oils and fats.

Ans:

[CBSE Sample Paper 2012]

Oils are unsaturated whereas fats are saturated

compounds.

59. Write the electron dot structure of ethene molecule $(C_{\circ}H_{\circ})$.

Ans: (H(:) C(:) H)

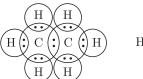

-C=C-H H H Ethene

60. Write the electron dot structure of ethane molecule C_oH_o .

Ans:

[CBSE 2011]

[CBSE 2011]

 ${f H} \ {f H} \ {f H} - {f C} - {f C} - {f H} \ {f H} \ {f H} \ {f H} \ {f H}$

61. Draw the structure of butanone molecule, $CH_3COC_9H_5$.

Ans:

[CBSE 2011]

2-Butanone

62. Draw the structure of ethanoic acid molecule, CH₃COOH.

Ans:

[CBSE2011]

$$\begin{array}{ccc} H & O \\ | & || \\ H - C - C - O - H \\ | & \\ H \end{array}$$

Ethanoic acid

63. Draw the structure of the hexanal molecule $C_{\kappa}HnCHO$.

Ans:

[CBSE2011]

Hexanal

64. Butanone has four carbon per molecule of a compound. Name the functional group present in it.

Ans:

[CBSE 2011]

Ketone

65. Name the following compound:

Ans:

[CBSE 2011]

1-Hexyne

66. Write the structural formula of chloroethane.

Ans:

H H

H-C-C-Cl

H H

H

67. Name the carbon compound which on heating with excess of cone. H₂SO₄ at 443 K gives ethene.

Ans: [CBSE 2009 (C)]

 $\begin{array}{c} \text{Ethanol,} \\ \text{CH}_3\text{CH}_2\text{OH} \xrightarrow{\quad \text{Conc.H}_2\text{SO}_4 \quad} \text{CH}_2\text{=CH}_2 + \text{H}_2\text{O} \end{array}$

68. What is meant by saturated hydrocarbon?

Ans: [CBSE 2009 (C)]

Those hydrocarbons in which valency of carbon is satisfied by single bonds only are called saturated hydrocarbons.

69. Name the compound formed when ethanol is warmed with ethanoic acid in the presence of few drops of cone. H_9SO_4 .

Ans: [CBSE 2009 (C)]

 $\mathrm{CH_{3}COOC_{2}H_{5}} + \mathrm{H_{2}O}$

[CBSE 2010]

70. What is the difference in the molecular formula of any two consecutive members of homologous series of organic compounds?

Ans: [CBSE 2008 (C)]

The difference between successive members of homologous series is of —CH₂ unit.

TWO MARKS QUESTIONS

71. Draw the structural formulae of the possible isomers for the compound with molecular formula C₂H_cO.

Ans: [CBSE Sample Paper 2017]

$$\overset{\text{O}}{\underset{\parallel}{\text{CH}_3-\text{C}-\text{CH}_3}}$$
 and $\overset{\text{O}}{\underset{\rightarrow}{\text{CH}_3-\text{CH}_2-\text{C}-\text{H}}}$

72. Explain why cannot we have isomers of first three members of alkane family.

Ans: [CBSE Sample Paper 2017, CBSE 2015]

It is because branching is not possible with carbon atoms, that is why, there are no isomers till propane.

73. Write balanced equations for the burning of (a) methane (b) ethane in air.

Ans: [CBSE 2017]

$$\begin{array}{ll} \text{(a) } \mathrm{CH_4(g)} + 2\mathrm{O_2(g)} & \longrightarrow \mathrm{CO_2(g)} + 2\mathrm{H_2O(l)} \\ \text{(b) } 2\mathrm{C_2H_6(g)} + 7\mathrm{O_2(g)} & \longrightarrow & 4\mathrm{CO_2(g)} + 6\mathrm{H_2O(l)} \end{array}$$

74. Compare the structures of benzene and cyclohexane by drawing them.

Ans: [CBSE 2017]

Benzene has 3 double bonds whereas cyclohexane has all single bonds.

Cyclohexane

- 75. a. Write chemical name and formula of vinegar?
 - b. Describe with a chemical equation what happens when sodium reacts with ethanol.

Ans: [CBSE 2017,2012]

a. Vinegar contains ethanoic acid,

$$_{\mathrm{CH_3-C-OH}}^{\mathrm{O}}$$

b. Sodium ethoxide and hydrogen gas is formed. $2C_9H_5OH + 2Na \longrightarrow 2C_9H_5ONa + H_9$

76. State reasons to explain why covalent compounds:

a. are bad conductors of electricity?

b. have low melting and boiling points?

Ans: [CBSE 2016]

- a. Covalent compounds do not form ions, hence they are bad conductor of electricity.
- b. Covalent compounds have weak intermolecular forces of attraction, therefore, have low melting and boiling points.
- 77. What is homologous series? Write the name and draw the structure of the second member of alkene series.

Ans: [CBSE 2016]

a. The series of organic compounds having same functional group and similar chemical properties is called homologous series.

b.
$$H H H H H - C = C - C - H H H H$$

78. List two characteristics of covalent compounds.

Ans: [CBSE 2015]

- (i) They have low melting and boiling point.
- (ii) They do not conduct electricity.
- 79. Name an element, other than carbon, which exhibits property of catenation up to seven or eight atoms. Are these compounds stable?

Ans: [CBSE 2015]

Si and Sulphur (S_o).

No, these compounds are not stable, rather they are reactive.

80. Select alkenes and alkynes from the following: C_9H_4 , C_3H_4 , C_9H_9 , C_4H_8

Ans: [CBSE 2015,2014]

Alkenes C₂H₄, C₄H₃ Alkynes C₃H₄, C₂H₂

81. Why are detergents preferred over soaps for washing clothes in hard water? Explain.

[CBSE 2015,2014] Ans:

Detergents work well even with hard water because their calcium and magnesium salts are soluble in water. They do not form scum.

82. What happens when ethyl alcohol and acetic acid react with each other in presence of cone. H2SO4?

[CBSE 2015,2013,2011]

Pleasant fruity smelling compound ester is formed

cone. H_2SO_4 . $CH_3COOH + C_2H_5OH \xrightarrow{Con.H_2SO_4} CH_3COOC_2H_5 + H_2O$

- 83. Name the functional groups of the following compounds:
 - $\begin{array}{cccc} R-C-OH & & b. & R-C-OR' \\ \parallel & & \parallel & \\ O & & & O \end{array}$
 - R-OH

[CBSE 2013] Ans:

- Carboxylic acid а.
- Ester b.
- Alcohol
- d. Halogen
- 84. Why is hydrogenation? What is its industrial application?

[CBSE 2015,2014] Ans:

Hydrogenation is a process of adding hydrogen to unsaturated compounds in presence of catalyst like nickel to form saturated hydrocarbons. Industrially, it is used to convert vegetable oils to vegetable ghee.

85. List four characteristics of homologous series.

[CBSE 2014]

- All members are derived from same general
- b. All members have same functional group.
- c. Each successive member differ by —CH₂ unit.
- d. All members can be prepared by same methods of preparation.
- **86.** Carbon does not form ionic compounds, why?

[CBSE 2015,2013]

Carbon cannot lose four electrons because high energy is needed to remove four electrons. It cannot gain 4 electrons because 6 protons cannot hold 10 electrons. That is why carbon cannot form ionic compounds.

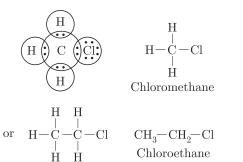

87. What are soaps? Why do they form scum with hard water?

Ans: [CBSE 2013]

Soaps are sodium or potassium salts of fatty acids e.g. sodium stearate. They react with Ca²⁺ and Mg²⁺ ions in hard water to form calcium and magnesium salt of fatty acids which are insoluble in water and called scum.

88. Give the electron dot structure of chloro-methane. Also write the formula and the name of next homologue of

[CBSE 2015] Ans:

89. The structural formula of an ester is

Write the structural formula of the corresponding alcohol and acid.

Ans: [CBSE 2015]

90. How do the melting and boiling points of the hydrocarbons change with increase in molecular mass? Ans: [CBSE 2012]

Melting and boiling point of the hydrocarbons increases with increase in molecular mass because surface area increases which results an increase in vander Waal's forces of attraction between molecules.

91. Write a chemical test to distinguish between ethanol and ethanoic acid. [CBSE 2012]

How would you distinguish experimentally between ethanol and ethanoic acid with the help of sodium hydrogen carbonate? Write the chemical equation for the reaction involved.

[CBSE 2012] Ans:

Add NaHCO₃ to each of them separately. Ethanol will not react. Ethanoic acid will give brisk effervescence due to CO₂.

 $\begin{array}{c} \mathrm{CH_{3}COOH} + \mathrm{NaHCO_{3}} \longrightarrow \\ \mathrm{CH_{3}COONa} + \mathrm{H_{2}O} + \mathrm{CO_{2}} \\ \mathrm{C_{2}H_{5}OH} + \mathrm{NaHCO_{3}} \longrightarrow & \mathrm{No} \ \mathrm{reaction} \end{array}$

92. Explain the action of soap in removing an oily spot from a piece of cloth.

Ans:

Cleansing action of soap: Soap has ionic end which is hydrophilic, interacts with water while carbon chain is hydrophobic interacts with oil, grease. The soap molecules orient themselves in a cluster in which hydrophobic tails are inside the cluster and ionic ends face outside.

These cluster are called micelles. These attract oil which is washed away by water.

93. Draw electron dot structures of (i) C_2H_4 (ii) C_2H_5OH . Ans: [CBSE 2011]

ii.
$$H : C : C : O : H$$

$$H : H : H$$

- 94. Give reasons for the following:
 - Unsaturated hydrocarbons show addition reactions but not saturated hydrocarbons.
 - b. Carbon forms only covalent bonds.

Ans: [CBSE 2011]

- a. Unsaturated hydrocarbons have double or triple bonds to which a molecule can be added whereas saturated hydrocarbons have single bonds addition reaction cannot take place.
- b. It cannot lose four electrons because high energy is required. It cannot gain four electrons because 6 protons cannot hold 10 electrons. Thus it shares four electrons to form covalent bonds and become stable.
- 95. Write the name and molecular formula of an organic compound having its name suffixed with '—ol' and having two carbon atoms in the molecule. With the help of a balanced chemical equation indicate what happens when it is heated with excess of cone. H₂SO₄.
 Ans: [CBSE 2010]

Ethanol

96. Write the names and molecular formulae of two organic compounds having functional group suffixed as '—oic acid'. With the help of a balanced chemical equation explain what happens when any one of them reacts with sodium hydroxide.

Ans: [CBSE 2010]

HCOOH and CH3COOH Methanoic acid Ethanoic acid HCOOH + NaOH \longrightarrow HCOONa + $\mathrm{H_2O}$ It is an acid-base reaction where a salt i.e., sodium methanoate and $\mathrm{H_2O}$ is formed.

97. What is homologous series? Which of the following organic compounds belong to the same homologous series?

The series of organic compounds having same functional group and similar chemical properties is called homologous series.

 $\rm C_2H_6O(\rm C_2H_5OH)$ and $\rm CH_4O(\rm CH_3OH)$ belong to same homologous series.

98. With the help of a suitable example explain in brief the process of hydrogenation mentioning the conditions of the reaction and also state any one physical property of substances changes due to hydrogenation.

Liquid oil changes to solid ghee

THREE MARKS QUESTIONS

99. A compound X on heating with excess of cone. H₂SO₄ at 443 K gives an unsaturated compound Y. X also reacts with sodium metal to evolve a colourless gas Z. Identify X, Y and Z. Write the equations of the chemical reaction of formation of Y and also write the role of conc. sulphuric acid in the reaction.

$$\begin{array}{c} X \text{ is } CH_3CH_2OH, \text{ Ethanol Y is Ethene, Z is } H_2. \\ C_2H_5OH \xrightarrow[X]{Conc\cdot H_5SO_4} CH_2 \underset{Y}{=} CH_2 + H_2O \\ 2CH_3CH_2OH + 2Na \xrightarrow{Sodium \text{ ethoxide}} Z \end{array}$$

Cone. H₂SO₄ acts as dehydrating agent.

- **100.** a. Why are most carbon compounds poor conductors of electricity?
 - b. Write the name and structure of a saturated compound in which carbon atoms are arranged in a ring. Give the number of single bonds present in this compound.

 a. It is because covalent compounds do not form ions, therefore, do not conduct electricity.

Cyclohexane

It has 18 single bonds.

101. Draw the structural formula of all the possible isomers of the compound with the molecular formula C_3H_6O and also give electron dot structures.

Ans: [CBSE Sample Paper 2018] [CBSE 2013]

102. An aldehyde as well as ketone can be represented by the same molecular formula say C_3H_6O . Write their structures and name them. State the relationship between two in language of science.

Ans: [CBSE Sample Paper 2017-2018, CBSE 2016]

These are functional isomers.

103. The carbon compounds X and Y have the molecular formula $\mathrm{C_4H_3}$ and $\mathrm{C_5H_{12}}$ respectively. Which one of these is most likely to show addition reaction? Justify your answer. Also give chemical equations to explain the process of addition reaction in this case.

[CBSE 2017]

 C_1H_3 will undergo addition reaction. It is because it has double bond while C₅H₁₂ is a saturated hydrocarbon

which cannot undergo addition reaction.
$$CH_2=CH-CH_2-CH_3+H_2\xrightarrow{Ni}$$

$$\mathrm{CH_3-CH_2-CH_2-CH_3}$$

Butane

- **104**. Complete the following equations:
 - $\mathrm{CH_{3}COOC_{9}H_{5}} + \mathrm{NaOH}$ —
 - CH₂COOH + NaOH —
 - $C_2H_5OH + CH_3COOH$ Conc. H_2SO_4

Ans:

[CBSE 2017]

- CH₃COOC₂H₅ + NaOH → CH₃COONa + C₂H₂OH
- b. $CH_3COOH + NaOH \longrightarrow CH_3COONa + H_2O$
- $C_2H_5OH + CH_3COOH \xrightarrow{Con.H_2SO_4} CH_3COOC_5H_5$
- 105. Complete the following reactions:
 - a. $CH_3COOH + N_2CO_3$
 - b. $CH_4 + O_2 \longrightarrow$
 - $C_2H_5OH + Na \longrightarrow$

Ans:

[CBSE 2017]

- $CH_4 + 2O_2 \longrightarrow CO_2 + 2H_2O$
- $2C_{2}H_{5}OH + 2Na \longrightarrow 2C_{2}H_{5}ONa + H_{2}$

106. Two carbon compounds 'X' and 'Y' have the molecular formula C₃H₆ and C₄H₁₀ respectively. Which one of the two is most likely to show addition reaction? Justify your answer. Also give chemical equation to explain the process of addition in this case.

[CBSE 2017]

C₃H₆ will undergo addition reaction because it has double bond.

- **107.** Complete the following chemical reactions:
 - a. $C_2H_5OH + O_2 \xrightarrow{Conc.H_2SO_4}$ b. $C_2H_5OH \xrightarrow{Conc.H_2SO_4}$

 - c. CH₃COOH + NaHCO₃ —
 - Ans:

- $\begin{array}{ccc} \mathrm{C_2H_5OH} & + 3\mathrm{O} & \longrightarrow & 2\mathrm{CO}_2 + 3\mathrm{H_2O} \\ \mathrm{C_2H_5OH} & \xrightarrow{\mathrm{Con.H_2SO_4}} & \mathrm{CH_2=CH_2} + & \mathrm{H_2O} \end{array}$
- $\begin{array}{c} {\rm CH_3COOH + NaHCO_3} \longrightarrow \\ {\rm CH_3COONa + H_2O + CO_2} \end{array}$

[CBSE 2017]

- 108. The molecular formula of two carbon compounds
- are C₄H₂ and C₂H₃. Which one is most likely to show addition reaction? Justify your answer. Also give the chemical equation to explain the process of addition reaction in this case.

[CBSE 2017]

C₄H₂ will undergo addition reaction. It is because it is unsaturated compound.

$$\begin{array}{c} \mathrm{CH}_2 \!\!=\! \mathrm{CH} \!\!-\! \mathrm{CH}_2 \!\!-\! \mathrm{CH}_3 \!+\! \mathrm{Br}_2(\mathit{aq.}) \!\longrightarrow\! \\ \mathrm{CH}_2 \!\!-\! \mathrm{CH} \!\!-\! \mathrm{CH}_2 \!\!-\! \mathrm{CH}_3 \\ \mid & \mid \\ \mathrm{Br} & \mid \\ \mathrm{Br} & \mid \\ \mathrm{Br} & \mid \\ \mathrm{Br} & \mid \\ \end{array}$$

109. Write the structural formula of ethanol. What happens when it is heated with excess of conc. H₂SO₄ at 443 K? Write the chemical equation for the reaction stating the role of cone. H₂SO₄ in this reaction.

[CBSE 2017] Ans:

$$\begin{array}{ccc} \mathrm{CH_{3}CH_{2}OH,\;Ethanol} \\ \mathrm{C_{2}H_{5}OH} & \xrightarrow{\mathrm{Con.\,H_{5}SO_{4}}} & \mathrm{CH_{2}\text{=}CH_{2}+\;H_{2}O} \end{array}$$

Concentrated H₂SO₄ is dehydrating agent.

110. Distinguish between esterification and saponification reaction with the help of equations for each. State one use of each (i) esters and (ii) saponification process.

Ans: [CBSE 2017]

Esterification

$$\begin{array}{c} {\rm C_2H_5OH} + {\rm CH_3COOH} \xrightarrow{\quad {\rm Con.\,H_2SO_4} \\ \\ {\rm CH_3COOC_2H_5} + {\rm H_2OOC_2H_5} \end{array}$$

Saponification

$$CH_3COOC_2H_5 + NaOH \longrightarrow$$

 $\mathrm{CH_{3}COONa} + \mathrm{C_{2}H_{5}OH}$

Esters are used in synthetic flavours, perfumes, etc. Saponification process is used for manufacture of soaps.

111. What happens when:

(Write chemical equation in each case)

- a. Ethanol is burnt in air?
- b. Ethanol is heated with excess cone. $\rm H_2SO_4$ at 443 K?
- c. A piece of sodium is dropped in ethanol.

Ans: [CBSE 2017]

a. CO_2 and H_2O are formed.

$$C_2H_5^2$$
 \longrightarrow $2CO_2 + 3H_2C_3$

b. Ethene is formed

$$\begin{array}{ccc} \text{CH}_3\text{CH}_2\text{OH} & \xrightarrow{\text{Con.H}_2\text{SO}_4} \\ \text{CH}_3\text{CH}_2\text{OH} & \xrightarrow{\text{H}_2\text{SO}_4} & \text{CH}_2\text{=CH}_2 + \text{H}_2\text{O} \end{array}$$

- c. Hydrogen gas evolves out $2\mathrm{CH_2CH_2OH} + 2\mathrm{Na} \ \longrightarrow \ 2\mathrm{CH_2CH_2ONa} + \mathrm{H_2}$
- 112. Explain esterification reaction with the help of a chemical equation. Describe an activity to show esterification.

Esterification is the process in which carboxylic acid reacts with alcohol in presence of conc. H2SO4 to form pleasant fruity smelling compound ester.

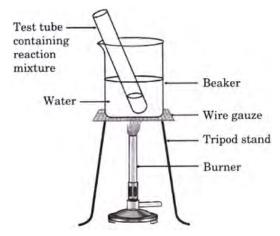

$$C_2H_5OH + CH_2COOH \xrightarrow{ConcH_2SO_4}$$

$$CH_2COOC_2H_5 + H_2O$$

Activity:

To carry out esterification reaction.

- Take 2 mL of ethanol (100% alcohol) in a test tube.
- Add 2 mL of glacial acetic acid.
- Add few drops of conc. H₂SO₄.
- Set the apparatus as shown in diagram.
- Heat the mixture in test tube in water bath for 5 to 10 minutes observe what happens.
- **Observation:** Pleasant fruity smell is observed.
- Conclusion: Ester is formed.

113. Name two oxidising agents that are used to convert alcohols to acids. Distinguish between ethanol and ethanoic acid on the basis of (a) litmus test (b) reaction with NaHCO₂.

Ans: [CBSE 2017]

These two oxidising agents will convert alcohols to acids (i) Alkaline KMnO₄ (ii) Acidified K₂Cr2O₇

- a. Litmus test: Acetic acid turns blue litmus red but ethanol does not.
- b. NaHCO3 test: Acetic acid will give brisk effer vescence due to evolution of ${\rm CO_2}$ whereas ethanol will not react.

114. Explain giving reasons, why carbon can neither form C⁴⁺ cation nor C⁴⁻ anion but forms covalent compounds which are bad conductors of electricity and have low melting and boiling points.

Carbon cannot lose four electrons because high energy is needed to remove four electrons. It cannot gain 4 electrons because 6 protons cannot hold 10 electrons.

It can share 4 electrons to form covalent bonds. Covalent compounds do not conduct electricity because these do not form ions. They have low melting and boiling points due to weak force of attraction between molecules.

115. Write the molecular formula of benzene and draw its structure. List in tabular form how covalent compounds differ from ionic compounds.

Benzene

	Covalent compounds	Ionic compounds
1.	They are bad conductor of electricity.	They are good conductor of electricity.
2.	They have low melting and boiling points.	They have high melting and boiling points.

116. What are hydrocarbons? Write the general formula of (a) saturated hydrocarbons (b) unsaturated hydrocarbons and draw the structure of one hydrocarbon of each type.

Hydrocarbons are compounds of carbon and hydrogen only

a. CnH_{2n+2} is general formula of saturated hydrocarbon. For example, CH_4

b. $CnH_{2n}(alkenes)$ and CnH_{2n-2} (alkynes) are general formulae of unsaturated hydrocarbons. For example,

$$H H$$
 $H-C=C-H$

117. What is an oxidising agent? What happens when oxidising agent is added to propanol? Explain with the help of a chemical equation.

Oxidising agent is a substance which adds oxygen or remove hydrogen. Propanol will get oxidised to

propanoic acid.
$$\label{eq:ch3ch2ch3ch3} CH_3CH_2CH_2OH + 2(O) \xrightarrow{Alkaline\,KMnO_i} CH_3CH_2COOH + H_sO$$

118. What are covalent compounds? Why are they different from ionic compounds? List three characteristic properties.

Ans: [CBSE 2016]

Those compounds in which bonds are formed by sharing of electrons are covalent compounds.

While ionic compounds are formed by complete transfer of electrons.

	Covalent compounds	Ionic compounds
1.	They have weak intermolecular forces of attraction.	They have strong intermolecular forces of attraction.
2.	They have low melting and boiling points.	They have high melting and boiling points.
3.	They do not conduct electricity.	They conduct electricity in molten state or in aqueous solution.

- 119. When ethanol reacts with ethanoic acid in presence of cone. H₂SO₄, a substance with fruity smell is produced. Answer the following questions:
 - State the class of compounds to which fruity smelling compounds belong. Write the chemical equation and write the chemical name of the product formed.
 - b. State the role of cone. H_2SO_4 in this reaction.

[CBSE 2016] Ans:

- The fruity smelling compounds are esters $\begin{array}{c} \text{CH}_3\text{COOH} + \text{C}_2\text{H}_5\text{OH} \xrightarrow{\text{Con.H}_2\text{SO}_4} \\ \text{Ethanoic acid} & \text{Ethanoi} \end{array} \xrightarrow{\text{Ethyl Ethanoate}} \begin{array}{c} \text{CH}_3\text{COOC}_2\text{H}_5 + \text{H}_2\text{O} \\ \text{Ethyl Ethanoate} \end{array}$
- Cone. H₂SO₄ acts as dehydrating agent.
- 120. Name the compound formed when ethanol is heated with excess of cone. H₂SO₄ at 443 K. Also write the chemical equation of the reaction stating the role of cone. H_aSO, in it. What would happen if hydrogen is added to the product in presence of catalyst such as Pd or Ni?

Ans: [CBSE 2016]

CH₃CH₂OH
$$\xrightarrow{\text{Conc.H}_2\text{SO}_4}$$
 CH₂=CH₂ + H₂O
Ethanol Ethene

Cone. $\mathrm{H_{2}SO_{4}}$ acts as dehydrating agent.

$$\begin{array}{ccc} \text{CH}_2 & \text{CH}_2 & \text{Conc.H}_2\text{SO}_4 \\ \text{Ethene} & \text{Ethane} \end{array}$$

- **121.** Write the chemical equation of the reaction of ethanoic acid with the following:
 - Sodium
 - Sodium hydroxide,

Write the name of one main product of each reaction. [CBSE 2016] Ans:

 $CH_3COOH + 2Na \longrightarrow 2CH_3COONa + H_2$ ethanoate

b. $CH_3COOH + NaOH \longrightarrow CH_3COONa + H_2O$ ethanoate

c.
$$CH_3COOH + C_2H_5OH \xrightarrow{Conc.H_2SO_4} CH_3COOC_2H_5 + H_2O$$
Ethyl

122. Write three different chemical reactions showing the conversion of ethanoic acid to sodium ethanoate. Write balanced chemical equation in each case. Write the name of the reactants and products other than ethanoic acid and sodium ethanoate in each case.

Ans: [CBSE 2016]

a.
$$2\text{CH}_3\text{COOH} + 2\text{Na} \xrightarrow{} 2\text{CH}_3\text{COONa} + \text{H}_2$$

Sodium Hydrogen

 $CH_3COOH + NaOH \longrightarrow CH_3COONa + H_2O$ Water hydroxide

c.
$$2CH_3COOH + Na_2CO_3 \longrightarrow$$

Sodium carbonate

$$\begin{aligned} \text{2CH}_3 \text{COONa} + \text{H}_2 \text{O} + \text{CO}_2 \\ \text{Water Carbon} \\ \text{dissiple} \end{aligned}$$

123. An organic compound 'P' is a constituent of wine. 'P' on reacting with acidified K₂Cr₂O₂ forms another compound 'Q'. When a piece of sodium is added to 'Q' a gas 'R' evolves which burns with a pop sound. Identify P, Q and R and write the chemical equations of the reactions involved.

[CBSE 2016] Ans:

$$\begin{array}{c} \text{CH}_3\text{CH}_2\text{OH} + 2[\text{O}] \xrightarrow{\text{K}_2\text{Cr}_2\text{O}_7/\text{Conc.H}_2\text{SO}_4} \\ \text{P} & \text{CH}_3\text{COOH} + \text{H}_2\text{O} \\ \text{O} \end{array}$$

Q is ethanoic acid,

$$2CH_3COOH + 2Na \longrightarrow 2CH_3COONa + H_2$$

124. a. Define the term functional group. Identify the functional group present in

(a)
$$H-C-H$$
 (b) $H-C-C=O$

b. What happens when 5% alkaline KMnO₄ solution is added drop by drop to warm ethanol taken in a test tube? State the role of alkaline KMnO. solution in this reaction.

Ans: [CBSE 2016]

a. Functional group is an atom or group of atoms which determine chemical properties of organic compounds. (a) Aldehyde, (b) Carboxylic acid.

b. Ethanoic acid is formed. $CH_3\,CH_2\,OH + 2\,[O] \xrightarrow{5\% \text{alkaline}} \text{CH}_3\,\text{COOH}$

KMnO₄ acts as oxidising agent.

125. Under which condition an oxidation reaction can be called as combustion reaction. Illustrate your answer with example.

[CBSE 2016] Ans:

When oxidation reaction produces heat as well as light it is called combustion reaction.

 $\mathrm{CH_4} + 2\mathrm{O_2} \ \longrightarrow \ \mathrm{CO_2} + 2\mathrm{H_2O} + \mathrm{heat} + \mathrm{light}$ It is oxidation as well as combustion reaction.

- **126.** a. Give chemical tests to detect the presence of (a) ethanol (b) ethanoic acid.
 - b. Why ethanoic acid is called glacial acetic acid?

[CBSE 2016]

(i) (a) Ethanol reacts with Na to liberate H, gas

 $2CH_3CH_2OH + 2Na \longrightarrow 2CH_3CH_2ONa + H_2$

(b) Ethanoic acid gives brisk effervescence of CO₂ with NaHCO₃

 $CH_3COOH + NaHCO_3 \longrightarrow$

 $CH_3COONa + H_2O + CO_2$

- (ii) It is because pure acetic acid (anhydrous) solidifies into solid crystals just below the room temperature at 16.7°C and look like glacier of snow.
- Chemical properties of ethanol is different from methyl ethanoate. Justify the statement with proper reason.
 - Methyl ethanoate is used in making perfume. Justify.
 - Ethanol is converted into ethene when excess of cone. H₂SO₄ is added. Justify with the help of reaction.

[CBSE 2016] Ans:

- Chemical properties of a compound depends on its functional group. Ethanol and methyl ethanoate have different functional group thus behave differently. CH₂CH₂OH has functional group – OH. It has specific smell, reacts with Na metal to liberate H₂. CH₂COOCH₂ has ester (RCOOR') as functional group. It has pleasant fruity smell, undergoes saponification reaction with NaOH.
- b. It is due to pleasant fruity smell.

c. Conc H_2SO_4 dehydrates ethanol to ethene. $CH_3CH_2OH \xrightarrow{ConcH_3SO_4} CH_2 = CH_2 + H_2O$

128. The structural formula of an ester is

Write the structural formula of the acid and the alcohol from which it might be prepared. Name the process of formation of an ester.

Ans: [CBSE 2016]

Ethanoic acid

Pentanol

Esterification is the process of forming ester

129. Write any three physical properties and three uses of ethanol.

Ans:

[CBSE 2016]

Properties

- a. Ethanol has specific smell.
- It is soluble in water.
- It has burning taste.

Uses

- a. It is used as solvent.
- It is used as an antiseptic.
- It is used in wine, beer, whisky, etc.
- It is used for preparation of ethanoic acid, ethyl ethanoate (esters).
- 130. Explain the following reactions with chemical equations:
 - Oxidation
 - Hydrogenation
 - Substitution

[CBSE 2016] Ans:

Oxidation

$$\label{eq:ch3OH} \begin{array}{c} \text{CH}_3\text{OH} + 2[\text{O}] & \xrightarrow{\text{KMnO}_4/\text{KOH}} \\ & & \text{HCOOH} + \text{H}_2\text{O} \end{array}$$

Hydrogenation

$$CH_2 = CH_2 + H_2 \xrightarrow{Ni} CH_3 - CH_3$$

Substitution

$$CH_4 + Cl_2 \xrightarrow{Sunlight} CH_3 - Cl + HCl$$

- **131.** C_3H_6 , C_4H_8 and C_5H_{10} belong to same 1 homologous series.
 - Define homologous series.
 - Why the melting and boiling point of C₅H₁₀ is higher than C₄H₃?
 - Arrange these hydrocarbons in order of increasing boiling points.

[CBSE 2016] Ans:

- The series of organic compounds having same functional group and similar chemical properties is called homologous series.
- C₅H₁₀ has higher molecular mass, more surface area, more van der Waal's forces of attraction, hence higher boiling point than C₁H₂.
- c. $C_3H_6 < C_4H_8 < C_5H_{10}$
- 132. The general formula of three compounds A, B and C is $C_n(H_{2n}$. 'B' has highest boiling point and 'C' has lowest boiling point.
 - Mention the type of compounds A, B, C.
 - Which of these have minimum number of carbon
 - Name the homologous series to which A, B and

Ans: [CBSE 2016]

- a. A, B, C are unsaturated compounds.
- b. C has minimum number of carbon atoms..
- c. They belong to alkene homologous series.
- 133. Draw the electron dot structure of ethyne. A mixture of ethyne and oxygen is burnt for welding. In your opinion, why cannot we use a mixture of ethyne and air for this purpose?

Ans: [CBSE 2015]

$$HC \equiv CH$$
, Ethyne, $H : C : C : H$

Ethyne and oxygen will produce lot of heat on combustion needed for welding whereas ethyne and air will not produce enough heat needed for welding purposes.

134. Classify the following carbon compounds into two homologous series and name them.

$$C_{3}H_{4},\ C_{3}H_{6},\ C_{4}H_{6},\ C_{4}H_{8},\ C_{5}H_{8},\ C_{5}H_{10}$$

 Ans : [CBSE 2015]

The series of organic compounds having same functional group and similar chemical properties is called homologous series.

$$\begin{array}{lll} \textbf{Alkene} \colon C_{3}H_{6}, \ C_{4}H_{8}, \ C_{5}H_{10} \\ \textbf{Alkyne} \colon C_{3}H_{4}, \ C_{4}H_{6}, \ C_{5}H_{3} \end{array}$$

135. Write the name and general formula of a chain of hydrocarbons in which an addition reaction with hydrogen is possible. State the essential conditions for an addition reaction. Stating this condition, write a chemical equation giving the name of the reactant and the product of the reaction.

Ans: [CBSE 2015]

Alkenes C_nH_{2n} Alkynes C_nH_{2n-2}

In above two series of hydrocarbons, addition of H2 is possible.

Hydrogen is added in presence of nickel as catalyst and heating is needed.

and heating is needed.

$$CH_2 = CH_2 + H_2 \xrightarrow{Ni} CH_3 - CH_3$$
Ethene Hydrogen Ethane

136. Why should we prefer vegetable oils over animal fats for cooking food? Give a balanced chemical equation for reaction of hydrogenation of vegetable oils. Name the catalyst in the reaction.

Ans: [CBSE 2015]

Vegetable oils are unsaturated and do not lead to formation of cholesterol. Animals fats are saturated lead to formation of cholesterol which can be deposited in arteries.

$$\begin{array}{c|c} R & R \\ R-C=C-R & +H_2 \xrightarrow{\quad \text{Ni} \quad \text{heat} \quad} R-C-C-R \\ \text{Vegetable oil} & H & H \end{array}$$

137. Convert CH4 into CC14 by substituting hydrogen atom with chlorine atom in successive reactions. Why

this reaction is referred to as substitution reaction.

Ans: [CBSE 2015]

$$\begin{array}{c} \text{All S:} \\ \text{CH}_4 + \text{Cl}_2 \xrightarrow{\quad \text{Sunlight} \quad} \text{CH}_3\text{Cl} + \text{HCl} \\ \text{Chloromethane} \end{array}$$

$$\begin{array}{c} \operatorname{CH_3Cl} + \operatorname{Cl_2} \xrightarrow{\operatorname{Sunlight}} \operatorname{CH_2Cl_2} + \operatorname{HCl} \\ \operatorname{Dichloromethane} \\ \operatorname{CH_2Cl_2} + \operatorname{Cl_2} \xrightarrow{\operatorname{Sunlight}} \operatorname{CHCl_3} + \operatorname{HCl} \\ \operatorname{CHCl_3} + \operatorname{Cl_2} \xrightarrow{\operatorname{Sunlight}} \operatorname{CCl_4} + \operatorname{HCl} \end{array}$$

This reaction is called substitution reaction because hydrogen atom is being substituted by 'Cl' in each step.

138. What is difference between the molecule of soaps and detergents, chemically? Explain the cleansing action of soaps.

Ans: [CBSE 2015]

Soaps are sodium or potassium salts of fatty acids. They contain —COONa group. Detergents are sodium or potassium salts of sulphonic acids. They contains —SO₃Na or —SO₄Na group. Soap has ionic end which is hydrophilic, interacts with water while carbon chain is hydrophobic interacts with oil, grease. The soap molecules orient themselves in a cluster in which hydrophobic tails are inside the cluster and ionic ends face outside. These cluster are called micelles. These attract oil which is washed away by water.

139. What is meant by isomers? Draw the structures of two isomers of butane, C₄H₁₀. Explain why we cannot have isomers of first three members of alkane series.

Isomers are those compounds which have same molecular formula but different structural formula.

$$\begin{array}{c} \operatorname{CH_3-\ CH_2-\ CH_2-\ CH_3} \\ \operatorname{CH_3-\ CH-CH_3} \\ \operatorname{CH_3} \\ 2\text{-Methylpropane} \end{array}$$

140. Write the molecular formula of the following compounds and draw their electron dot structures:(a) Ethane (b) Ethene (c) Ethyne

Ans: [CBSE 2015]

a.
$$H - C - C - H$$
, $H : C : C : H$, C_2H_6

$$H : H : H$$

$$H : H : H$$

$$H : H : H : C : C : H$$

$$H : H : H : C : C : H$$

$$H : H : C : C : H$$

$$H : C_2H_4$$

c.
$$HC \equiv CH$$
, $H \supseteq C \supseteq CH$, C_2H

141. Why is homologous series of carbon compounds so

called? Write the chemical formula of two consecutive members of any two homologous series and state the part of these compounds that determines their (a) physical and (b) chemical properties.

Ans: [CBSE 2015]

Homologous means members of same family that is why series of carbon compounds having same functional group and similar properties is called homologous series.

Homologous series of alcohol.

 CH_3OH Methanol C_9H_2OH Ethanol

 $m CH_3$ — and $m C_2H_5$ — groups determine physical properties and —OH group determines chemical properties. Homologous series of aldehyde.

 $\begin{array}{ll} {\rm CH_3OH} & {\rm Ethanol} \\ {\rm C_2H_5OH} & {\rm Propanal} \end{array}$

Here, CH_3 —and C_2H_5 — groups determine physical properties while —CHO group determines chemical properties.

142. What are esters? How are they prepared? List two uses of esters.

Ans: [CBSE 2014]

Esters are pleasant fruity smelling compounds with general formula R—COOR'. They are prepared by reaction of carboxylic acid and alcohol in presence of cone. H₂SO₄.

Uses

- They are used in cold drinks and ice creams as synthetic flavours.
- ii. They are used in perfumes.
- 143. State the meaning of functional group in an organic compound. Write the formula of the functional group present in alcohols, aldehydes, ketones and carboxylic acids.

Functional group is an atom or group of atoms which determine chemical properties of organic compounds (a) Aldehyde, (b) Carboxylic acid.

$$\begin{array}{c} & \text{O} \\ \parallel \\ -\text{OH Alcohol}; -\text{C}-\text{H Aldehyde} \end{array}$$

$$\begin{array}{ccc} O & O \\ \parallel & \parallel \\ -C-\text{Ketone}; -C-\text{OH Carboxylic acid} \end{array}$$

144. A carboxylic acid (molecular formula $C_2H_4O_2$) reacts with an alcohol in the presence of an acid catalyst to form a compound X. The alcohol on oxidation with alkaline $KMnO_4$ following by acidification gives the same carboxylic acid $C_2H_4O_2$. Write the name and structure of (i) carboxylic acid, (ii) alcohol and (iii) the compound 'X'.

$$\mathrm{CH_{3}COOH} + \mathrm{C_{2}H_{5}OH} \xrightarrow{\quad \mathrm{Conc.\,H_{2}SO_{4}} }$$

Ethanoic acid Ethanol

$$CH_{2}COOC_{2}H_{2} + H_{2}O$$

$$\begin{array}{c} \mathrm{CH_{3}CH_{2}OH} + 2[\mathrm{O}] \xrightarrow{\mathrm{KMnO_{4}/KOH}} \mathrm{CH_{3}COOK} \\ \xrightarrow{\mathrm{H^{+}}} \mathrm{CH_{3}COOH} + \mathrm{K^{+}} \end{array}$$

X is $CH_3COOC_2H_5$, ethyl ethanoate.

145. What is meant by homologous series of carbon compounds? Write the general formula of (i) alkenes, and (ii) alkynes. Draw the structures of the first member of each series to show the bonding between the two carbon atoms.

Ans: [CBSE 2014]

The series of organic compounds having same functional group and similar chemical properties is called homologous series.

i. Alkenes C_nH_{2n}

$$\begin{array}{ccc} H & H \\ | & | \\ H - C = C - H \\ \end{array}$$
Ethene

ii. Alkynes
$$C_nH_{2n-2}$$

$$H-C\!\equiv\!C-H$$
 Ethyne

- ${\bf 146.}$ Write the chemical equations to show what happens when
 - a. an ester reacts with a base?
 - b. methane is treated with chlorine in the presence of sunlight?
 - c. ethanol reacts with ethanoic acid in the presence of sulphuric acid?

Ans: [CBSE 2014]

a.
$$CH_3COOC_2H_5 + NaOH \xrightarrow{\phantom{$$

b.
$$CH_4 + Cl_2 \xrightarrow{Sunlight} CH_3Cl + HCl$$

$$\begin{aligned} \text{c.} \quad \text{CH}_3\text{COOH} + \text{C}_2\text{H}_5\text{OH} & \xrightarrow{\text{Conc.H}_2\text{SO}_4} \\ & & \text{CH}_3\text{COOC}_2\text{H}_5 + \text{H}_2\text{O} \end{aligned}$$

- **147.** Write the respective chemical equations to show what happens when
 - a. methane is burned in presence of oxygen?
 - b. ethanol is heated with concentrated sulphuric acid at 443 K?
 - c. ethanol reacts with ethanoic acid in the presence of an acid acting as a catalyst?

Ans: [CBSE 2014]

$$\begin{array}{ll} \text{a.} & \text{CH}_4 + 2\text{O}_2 \xrightarrow{\hspace{1cm} \text{Conc.} \text{H}_2 \text{SO}_4} + 2\text{H}_2 \text{O} \\ \text{b.} & \text{CH}_3 \text{CH}_2 \text{OH} \xrightarrow{\hspace{1cm} \text{Conc.} \text{H}_3 \text{SO}_4} & \text{CH}_2 \text{=CH}_2 + \text{H}_2 \text{O} \end{array}$$

c.
$$CH_3COOH + C_2H_5OH \xrightarrow{Conc.H_2SO_4} CH_3COOC_2H_5 + H_2O$$

148. Write chemical equations to describe two different oxidations of ethanol. List two uses of ethanol.

Ans: [CBSE 2015]

$$\begin{split} \mathrm{CH_3CH_2OH} &+ 2[\mathrm{O}] \xrightarrow{\quad \mathrm{K_2Cr_2O_7/H_2SO_4} \quad} \mathrm{CH_3COOH} \\ \mathrm{CH_2CH_2OH} &+ \mathrm{O_2} \xrightarrow{\quad \mathrm{CO_2} + \mathrm{H_2O} + \mathrm{Heat} + \mathrm{Light}} \end{split}$$

Ethanol is used as an antiseptic and solvent

149. A carbon compound X turns blue litmus to red and

has a molecular formula $C_2H_4O_2$. Identify X and draw its structure. Write chemical equation for the reaction and name of the product formed in each case when X reacts with

a. ethanol in the presence of concentrate H₂SO₄.

b. sodium carbonate.

Ans:

[CBSE 2013]

X is CH₂COOH

$$\begin{array}{ccc} H & O \\ H - \overset{\parallel}{C} - \overset{\parallel}{C} - OH \\ H \end{array}$$

a.
$$CH_3CH_2OH \xrightarrow{Conc.H_3SO_4} CH_2 = CH_2 + H_2O$$

b. $2CH_3COOH + Na_2CO_3 \longrightarrow 2CH_3COONa + H_2O + CO_2$

150. What is meant by isomers? "We cannot have isomers of first three members of alkane series." Give reason to justify this statement. Draw the structures of two isomers of pentane, C_zH₁₀.

Ans:

[CBSE 2013]

Isomers are those compounds which have same molecular formula but different structural formula.

$$\mathrm{CH_{3}^{-}\ CH_{2}^{-}CH_{2}^{-}\ CH_{2}^{-}\ CH_{2}^{-}\ CH_{3}^{-}}$$

$$\begin{array}{c} \operatorname{CH_3-CH-CH_2-CH_3} \\ \operatorname{CH_3} \end{array}$$

2-Methylbutane

151. An ester has the molecular formula C₄H₈O₂. Write its structural formula. What happens when this ester is heated in the presence of sodium hydroxide solution? Write the balanced chemical equation for the reaction and name the products. What is a saponification reaction.

Ans:

[CBSE 2010]

[CBSE2009]

$$CH_3CH_2$$
— C — CCH_3 is structural formula.

When ester is heated with NaOH, sodium salt of acid and alcohol are formed. It is called saponification reaction.

$$CH_3CH_2$$
- C - OCH_3 + $NaOH$ \longrightarrow

$$\begin{array}{c} & \text{O} \\ \parallel \\ \text{CH}_3\text{CH}_2 - \text{C} - \text{ONa} + \text{CH}_3\text{OH} \\ \text{Sodium propanoate} & \text{Methano} \end{array}$$

- **152.** a. What is meant by a functional group in an organic compound? Name the functional group present in
 - (1) CH₂CH₂OH
 - (2) CH₃COOH
 - b. State one point of difference between soap and synthetic detergent.

Ans:

 a. Functional group is an atom or group of atoms which determine chemical properties of organic

- compounds. (1) Alcohol, (2) Carboxylic acid.
- a. Soaps do not work well with hard water as form insoluble scum whereas detergents work well with hard water.
- **153.** Give reasons for the following observations:
 - The element carbon forms a very large number of compounds.
 - b. Air holes of a gas burner have to be adjusted when the heated vessels get blackened by the flame.
 - Use of synthetic detergents causes pollution of water.

Ans: [CBSE 2009]

- a. It is due to tetravalency of carbon and property of catenation shown by carbon to maximum extent.
- b. Air holes must be kept open fully so that complete combustion of fuel takes place producing blue flame.
- c. Some of detergents are not bio¬degradable, they create water pollution.
- 154. a. Why are covalent compounds generally poor conductors of electricity?
 - b. Name the following compound:

$$\begin{array}{c|c} H & O & H \\ \hline H - C - C - C - H \\ \hline H & H \end{array}$$

c. Name the gas evolved when ethanoic acid is added to sodium carbonate. How will you test the presence of this gas.

Ans: [CBSE 2008]

- a. It is because they do not form ions in their aqueous solution.
- b. Propanone
- c. Carbon dioxide gas will be liberated. Test: Pass the gas through lime water. If lime water turns milky it shows the presence of CO₂ gas.

FIVE MARKS OUFSTIONS

155. You are given balls and stick model of six carbon atoms and fourteen hydrogen atoms and sufficient number of sticks. In how many ways one can join the models of six carbon atoms and fourteen hydrogen atoms to form different molecules of C_6H_{14} .

A 200 .

[CBSE Sample Paper 2017-2018]

There are five ways in which six carbons can be joined with 14 hydrogen atoms.

Hexane

3-Methylpentane

iv.
$$CH_3$$
- CH - CH - CH_3
 CH_3
 CH_3

2, 3-Dimethylbutane

$$\begin{array}{ccc} \operatorname{CH_3} & \operatorname{CH_3} \\ \text{v.} & \operatorname{CH_3-C-CH_2-CH_3} \\ & \operatorname{CH_3} \end{array}$$

2, 2-Dimethylbutane

Check Anser:

156. Soaps and detergents are both types of salts. State the difference between the two. Write the mechanism of the cleansing action of soaps. Why do soaps not form lather (foam) with hard water? Mention any two problems that arise due to the use of detergents instead of soaps.

Ans: [CBSE 2017]

- Soaps are sodium or potassium salts of fatty acids e.g. —COONa. Detergents are sodium or potassium salts of sulphonic acids e.g. —SO₃Na or —SO₄Na
- Soaps are sodium or potassium salts of fatty acids. They contain —COONa group. Detergents are sodium or potassium salts of sulphonic acids. They contains —SO, Na or —SO, Na group. Soap has ionic end which is hydrophilic, interacts with water while carbon chain is hydrophobic interacts with oil, grease. The soap molecules orient themselves in a cluster in which hydrophobic tails are inside the cluster and ionic ends face outside. These cluster are called micelles. These attract oil which is washed away by water.
- Soaps react with Ca²⁺ and Mg²⁺ ions in hard water to form calcium or magnesium salts of fatty acids which are insoluble in water and thus interfere in action of soap,
- (i) Detergents are more expensive than soaps.
 - (ii) Some detergents are not biodegradable i.e. will create pollution.
- **157.** Why are certain compounds called hydrocarbons? Write the general formula for homologous series of alkanes, alkenes and alkynes and also draw the structure of the first member of each series. Write the name of the reaction which converts alkene into alkane. Also write the chemical equation to show the necessary conditions for the reaction to occur.

Compounds of carbon and hydrogen are called hydrocarbons.

Alkane
$$C_nH_{2n+2}$$

Alkene C_nH_{2n}

$$\begin{array}{c} H & H \\ I - C = C - H \\ \\ Ethene \end{array}$$

Alkyne C_nH_{2n-2} $HC \equiv CH$ Ethyne Hydrogenation i.e. addition of H_2 leads to formation of

alkanes from alkenes.
$$\mathrm{CH_2} = \mathrm{CH_2} + \mathrm{H_2} \xrightarrow{\mathrm{Ni}} \mathrm{CH_3} - \mathrm{CH_3}$$

- 158. Complete the following chemical equations and write the chemical name of the products formed.
 - a. $CH_2=CH_2+H_2\longrightarrow$
 - b. $CH_3^2COO^2H + NaOH CH_3CH_3OH \xrightarrow{H_2SO_4}$

 - d. $HCOOH + Na \longrightarrow$ e. $C_2H_5OH \xrightarrow{Alk \cdot MnO_4}$

Ans:

[CBSE 2018]

a.
$$CH_2 = CH_2 + H_2 \longrightarrow CH_3 - CH_3$$

b.
$$CH_3COOH + NaOH \longrightarrow$$

$$\mathrm{CH_{3}COONa} + \mathrm{H_{2}O}$$
Sodium ethanoate

c.
$$CH_3CH_2OH \xrightarrow{Conc.H_2SO_4} CH_2 = CH_2 + H_2O$$

$$\begin{split} & d. & 2HCOOH + 2Na \longrightarrow 2HCOONa + H_2 \\ & e. & C_2H_5OH \stackrel{Alk.\,KMnO_4}{\longrightarrow} CH_3COOH + H_2O \end{split}$$

e.
$$C_2H_5OH \xrightarrow{Alk. KMnO_4} CH_3COOH + H_2O$$

- 159. a. Give a chemical test to distinguish between saturated and unsaturated hydrocarbons.
 - Name the products formed when ethane burns in air. Write the balanced chemical equation for the reactions showing two types of energies liberated.
 - Why is reaction between methane and chlorine in presence of sunlight is considered a substitution reaction.

[CBSE 2016] Ans:

- Saturated hydrocarbons will not react with bromine water whereas unsaturated hydrocarbons will decolourise it.
- Carbon dioxide and water will be formed. $2C_2H_6 + 7O_2 \longrightarrow 4CO_2(g) + 6H_2O(l)$ + Heat + Light
- It is because hydrogen atom is substituted by halogen atom, that is why it is called substitution reaction.
- You have three unlabelled test tubes containing **160**. a. ethanol, ethanoic acid and soap solution. Explain the method you would use to identify the compounds in different test tubes by chemical tests using litmus paper and sodium metal.
 - Give reason of formation of scum when soaps are used with hard water.

[CBSE 2016] Ans:

- Red litmus paper will become blue in soap solution only. Ethanoic acid will turn blue litmus red only. Ethanol will react with Na metal to form sodium ethoxide and hydrogen gas will be liberated.
- Soaps are sodium or potassium salts of fatty acids which react with Ca²⁺ and Mg²⁺ ions in hard water to form calcium or magnesium salts of fatty acids which are insoluble in water called scum.
- 161. What are micelles? Why does it form when soap is added to water? Will a micelle be formed in other solvents such as ethanol also? State briefly how the formation of micelles help to clean the clothes having oily spots.

Ans: [CBSE 2016]

Micelles are cluster of molecules in which hydrophobic tails are inside the cluster 3 and the ionic ends are at the surface of clusters. Soap molecules when dissolved in water they form a cluster due to hydrophobic part of molecules orient themselves away from water. So they arrange towards inside of the cluster while hydrophilic part remain outside of cluster.

No, micelles will not be formed in alcohol. Soap in form of micelles is able to clean because the oily dirt will be collected in centre of micelle which is rinsed away by water.

- **162.** a. Differentiate between soap and detergent.
 - Explain why, soaps form scum with water whereas detergent do not.

[CBSE 2015] Ans:

	Soap	Detergent
1.	Sodium salts of fatty acids.	Sodium salts of sulphonic acids.
2.	They do not work well with hard water.	They work well even with hard water.

- Sodium salts of fatty acids (soaps) react with Ca²⁺ and Mg²⁺ ions in hard water to form insoluble salts called scum. Detergents form soluble salts with Ca^{2+} and Mg^{2+} .
- How is vinegar made? 163. a.
 - What is glacial acetic acid? What is its melting
 - Why are carboxylic acids called weak acids?
 - d. Write the name and formula of compounds formed when the ester CH₃COOC₂H₅ undergoes saponification.

[CBSE 2014, 2013] Ans:

- Vinegar is 5-8% solution of acetic acid (Ethanoic acid) in water. It can be made by fermentation of ethanol in presence of oxygen.
- Glacial acetic is pure (100%) acetic acid. Its melting point is 290 K.
- They do not ionise completely in aqueous solution.
- $CH_3COOC_9H_5 + NaOH$ CH₂COONa + C₂H₅OH Ethanol Sodium ethanoate

How will you bring out following reactions? Write

the concerned chemical reaction.

- (1) Ethanol to ethene
- (2) Ethanol to ethanoic acid
- b. Give one example with chemical equation for the following reactions:
 - (1) Substitution reaction
 - (2) Saponification reaction
 - (3) Combustion reaction

[CBSE 2014] Ans:

a. (1)
$$CH_3CH_2OH \xrightarrow{Conc.H_2SO_4} CH_2 = CH_2 + H_2O$$
Ethanol

(2)
$$CH_3CH_2OH \xrightarrow{K_2Cr_2O_7/Conc. H_2SO_4} CH_3COOH + H_9O$$

(1) Substitution reaction

$$CH_4 + Cl_2 \xrightarrow{Sunlight} CH_3Cl + HCl$$

(2) Saponification reaction

$$\begin{array}{c} \mathrm{CH_{3}COOCH_{3} + NaOH} \longrightarrow \\ \mathrm{CH_{3}COONa} + \mathrm{CH_{3}OH} \end{array}$$

(3) Combustion reaction

$$CH_4 + 2O_2 \longrightarrow CO_2 + 2H_2O$$

165. Identify the compounds 'A' to 'E' in the following sequence:

a.
$$CH_3CH_2OH \xrightarrow{KMNO_4/KOH} A + H_2O$$

b.
$$CH_3CH_2OH + A \xrightarrow{Conc. H_2SO_4} B + H_2O$$

c.
$$B + NaOH \longrightarrow C + CH_3CH_2OH$$

d.
$$A + NaHCO_3 \longrightarrow C + D + H_2O$$

e.
$$CH_3CH_2OH + E \longrightarrow CH_3CH_2ONa + H_2$$

Ans:

a.
$$CH_3CH_2OH \xrightarrow{KMNO_4/KOH} CH_3COOH + H_2O$$
'A'

b.
$$CH_3CH_2OH + CH_3COOH \xrightarrow{Conc.H_2SO_4}$$

 $CH_3COOCH_2CH_3 + H_2O$

c.
$$CH_3C_{.B'}^{OOCH_2CH_3} + NaOH \longrightarrow$$

$$CH_3C_{.C'}^{OONa} + CH_3CH_2OH$$

d.
$$CH_3COOH + NaHCO_3 \longrightarrow CH_3COONa + CO_2 + H_2O$$

e. $2CH_3CH_3OH + 2Na \longrightarrow 2CH_3CH_3ONa + H_2O$

e.
$$2CH_3CH_2OH + 2Na \longrightarrow 2CH_3CH_2ONa + H_2$$

A is CH₃COOH, 'B' is CH₃COOCH₂CH₃, *C' is $\mathrm{CH_{2}COONa}$, 'D' is $\mathrm{CO_{2}}$, 'E' is Na (Sodium metal).

166. An organic compound "X' on heating with cone. H₂SO₄ forms a compound 'Y' which on addition of one molecule of hydrogen in the presence of nickel forms a compound 'Z'. One molecule of compound 'Z' on combustion forms two molecules of CO₂ and three molecules of H₂O. Identify giving reasons the compounds X', 'Y' and 'Z'. Write the chemical equations for all the chemical reactions involved.

$$\begin{split} \mathrm{CH_{3}CH_{2}OH} & \xrightarrow{\mathrm{Conc.H_{2}SO_{4}}} \mathrm{CH_{2}} \underset{\mathrm{'Y'}}{=} \mathrm{CH_{2}} + \mathrm{H_{2}O} \\ \mathrm{CH_{2}} & \xrightarrow{\mathrm{'Y'}} \mathrm{CH_{2}} + \mathrm{H_{2}} \xrightarrow{\mathrm{Ni}} \mathrm{CH_{3}} \xrightarrow{\mathrm{'}} \mathrm{CH_{3}} \end{split}$$

 $C_2H_6 + (7/2)O_2 \longrightarrow 2CO_2 + 3H_2O$

'Z' on combustion gives 2CO_2 and $3\text{H}_2\text{O}$ so hydrocarbon 'Z' must be ethane. "Y' on addition of H_2 gives ethane so 'Y' must be ethene. "X' in presence of cone. H_2SO_4 dehydrates to ethene i.e., 'X' is ethanol.

167. List in tabular form three physical and two chemical properties on the basis of which ethanol and ethanoic acid can be differentiated.

Ans: [CBSE 2012]

	Ethanol	Ethanoic acid
	Physical Pro	operties
1.	It has Specific smell	It has vinegar like smell.
2.	It has burnnrg taste	It has sour taste
3.	Pure ethanol is liquid of room temprature.	Pure acetic acid is solid below 290 K.
	Chemical Pr	operties
4.	It does not change colour of litmus	It turn-s blue litmus red.
5.	It does not react with NaHCO_3	It liberstes CO_2 with $NaHCO_3$.

168. What are detergents chemically? List two merits and two demerits of using detergents for cleansing. State the reason for the suitability of detergents for washing even in case of water having calcium and magnesium ions.

Ans: [CBSE 2012]

Detergents are sodium or potassium salts of sulphonic acids of benzene or sulphates of unsaturated hydrocarbons like alkenes with $-SO_3Na$ or $-SO_4Na$ group.

Merits:

They are more effective than soaps.

They work well even with hard water.

Demerits:

- a. They are expensive.
- b. Some of them create water pollution.
- 169. a. In a tabular form, differentiate between ethanol and ethanoic acid under the following heads:
 - (i) Physical state
 - (ii) Taste
 - (iii) NaHCO₃ test
 - (iv) Ester test
 - Write a chemical reaction to show dehydration of ethanol.

Ans : [C	CBSE	2011]
-----------------	------	-------

(i)

	Ethanol	Ethanoic acid
(a)	Physical taste: It is liquid.	It is solid below 290 K
(b)	Taste: It has burning taste.	It has sour taste.
(c)	NaHCO ₃ test It does not react.	It liberates CO2 gas.
(d)	Ester test: It reacts with carboxylic acid to form easter	It reacts with alcohol to form pleasant to form fruity smelling esters.

(ii)
$$CH_3CH_2OH + \xrightarrow{Conc. H_2SO_4} CH_2=CH_2 + H_2O$$

- 170. Give reasons for the following:
 - Element carbon forms compound mainly by covalent bonding.
 - b. Diamond has high melting point.
 - c. Graphite is good conductor of electricity.
 - d. Acetylene bums with sooty flame.
 - e. Kerosene does not decolourise bromine water whereas cooking oil does.

Ans: [CBSE 2011]

- a. It is because carbon can neither lose 4 electrons nor gain 4 electrons. It can share four electrons to form covalent bonds.
- b. Diamond has strong C—C bonds and compact 3-D structure in which one carbon atom is covalently bonded to other four carbon atoms therefore, has high melting point.
- c. In graphite, one carbon atom is bonded to other three carbon atoms. Remaining one electron on each carbon is free to move due to which graphite conducts electricity.
- d. Acetylene has high carbon content, therefore, partial oxidation causes it to burn with sooty or smoky flame.
- e. Kerosene is a saturated compound, therefore, does not decolourise bromine water.
